EDUCATION

POLITEKNIK ELEKTRONIKA NEGERI SURABAYA (PENS)

Jul 2022 - Present

Bachelor of Applied Science

- Major in Informatics Engineering;
- Cumulative GPA: 3.65/4.00;
- Relevant Coursework: Algorithms; Data Structures; Object-Oriented Programming; Database; Web Programming; Mobile Programming; Software Design Pattern; Agile-based Software Development.

EXPERIENCE

XPOSURE INDONESIA

January 2026 – Present

Full time- Full-Stack Developer

- Architected and optimized the data layer of a Customer Relationship Management platform managing 50K+ customer records, reducing heavy-processing time by 40% through SQL tuning, indexing, views, and asynchronous job queues.
- Modernized a legacy game-item sales platform into a full-stack architecture, improving page performance by 45% and simplifying front-end, back-end, database, and payment integration flows.
- Designed an AI-assisted development workflow for a legacy Delphi retail system, reducing implementation and debugging time by 20% through structured prompting, testing, build validation, and automated fix cycles.
- Standardized CI/CD, Docker deployment, and environment configuration across 10 applications, reducing manual deployment effort by 30% and improving release reliability.

PT. KASIR PINTAR INTERNASIONAL

September 2025 – Present

Freelance- Front-End Developer

- Built a responsive event-booking platform serving 100+ users, delivering streamlined booking flows for customers and event organizers.
- Designed reusable UI components and session-recovery mechanisms, preventing data loss across 3-step booking forms after session expiration.
- Improved Core Web Vitals and page performance by 20% through image optimization, lazy loading, dynamic imports, caching, and bundle monitoring.

PT. BANK RAKYAT INDONESIA (PERSERO) TBK.

December 2024 – December 2025

Full time - Front-End Developer (Under PT. Orde Digital Intelektual)

- Supported production issue resolution and development standardization for the QLola Cash Management Platform, improving front-end reliability across multiple micro front-ends.
- Optimized micro front-end architecture by applying shared engineering standards, reducing remote bundle sizes and build image footprints by 70% to streamline local development and deployment.
- Engineered WAF error-handling flows that surfaced blocked-request messages to users, improving troubleshooting visibility and reducing related support tickets by 30%.

CENTRAL BANK OF INDONESIA

August – October 2024

Internship - Full Stack Developer

- Designed and developed the SI-SABI application for the PSBI assistance program, improving administrative efficiency by 25% for internal staff and beneficiaries.
- Built the application architecture using Next.js and PostgreSQL, integrating front-end, API, and database workflows while documenting endpoints with Swagger.
- Improved data-access performance by 15% through query optimization, selective data fetching, and more efficient API response structures.

PILARMEDIA INDONESIA

June – October 2024

Full time - Front-End Developer

- Developed front-end modules for web-based logistics ERP, translating complex order, shipment, and operational workflows into intuitive user interfaces.
- Designed reusable Material UI components and Redux state-management patterns across 8+ modules, reducing duplicated code by 40% and improving UI consistency.
- Standardized REST API integration, asynchronous states, and error handling, reducing redundant requests by 25% and improving responsiveness across data-intensive workflows.

AGILE PRODUCT-BASED LEARNING

February – December 2024

Full time - Assistant Product Owner

- Coached and guided the development team in building the Countlorie application, a calorie tracking platform, using Flutter, NextJS, and Laravel, which achieved a 30% increase in user retention within the first three months of launch.
- Advocated for Clean Code principles (DRY, KISS, YAGNI, SOLID), leading to a 25% reduction in codebase complexity and improved scalability.
- Conducted continuous code reviews and refactoring sessions, ensuring the codebase remained clean, maintainable, and scalable.

DATA POLIS

May 2023 – June 2024

Internship - Front-End Developer

- Developed a responsive information system for the Association of Indonesian Insurance and Reinsurance Broker Experts (APARI), improving accessibility across devices and increasing user satisfaction by 20%.
- Implemented an infinite scroll feature, enhancing website performance when displaying datasets of over 3000+ records, reducing load times by 40%.
- Streamlined future development processes by creating reusable components, reducing development time by 15%.

PROJECTS

CALME – AI-POWERED SELF-CARE PLATFORM

Oct – Nov 2024

- Led product planning and Scrum ceremonies for a 3-person cross-functional team across 3 one-week sprints, including sprint planning, daily scrums, reviews, and retrospectives.
- Managed and prioritized an 8-feature product backlog, translating user and market needs into feature decisions for AI chatbot, meditation, journaling, coping tools, educational content, and smartwatch integration.
- Defined the product positioning, target users, and MVP scope through market and competitor analysis, ensuring development focused on high-impact user needs.
- Won 1st Place in the Software Development Competition at Hology 7.0, organized by the University of Brawijaya.

ECO.IN – INTERACTIVE ENVIRONMENTAL EDUCATION PLATFORM

June 2024

- Led product and business strategy for a 3-person cross-functional team during a 48-hour hackathon, translating environmental education challenges into a focused mobile MVP.
- Defined the target market, competitor positioning, revenue streams, and core features—including interactive stories, 3D/AR species education, and quizzes—while shaping the Flutter–Firebase–Firestore architecture.
- Won 3rd Place in the Slashcom Android Hackathon, organized by UPN “Veteran” Jawa Timur.

COUNTLORIE – AI-POWERED CALORIE TRACKING PLATFORM

February – December 2024

- Shaped a calorie-tracking product featuring personalized assessments, intake analytics, AI-powered summaries, and a database of 25,000 food and beverage items.
- Validated the product through user surveys, NPS evaluation, and competitor analysis, translating feedback into feature priorities and product improvements.
- Launched Countlorie on Google Play, reaching 100+ downloads and, based on the latest figures you provided, a 4.6 rating from 96 reviews. The public listing currently confirms the 100+ download milestone.

ACHIEVEMENTS

Champion Software Development Competition Hology 7.0 by University of Brawijaya	November 2024
2 nd Runner Up Android Hackathon Slashcom by UPN “Veteran” Jawa Timur	June 2024
4 th Runner Up Hackathon 6.0 Technoscape 2023 by Bina Nusantara University	Aug 2023
1 st Runner Up Web Design INVENTION 2022 by Udayana University	Oct 2022
Winner AR Creator Challenge Powered by Snap AR: Ramadan 2022 Series	May 2022
Finalist Web Design ITCC 2021 by Udayana University	Nov 2021
1 st Runner Up COMPFEST 13 MiniCase BizzIT by University of Indonesia	Oct 2021

CERTIFICATIONS & TRAINING

Basic of Front-End Development – Dicoding Academy	Jul 2022
Basic of JavaScript Programming – Dicoding Academy	May 2021
Basic of Back-End Development with NodeJS – Dicoding Academy	Mei 2021
Cloud Practitioner Essentials AWS – Dicoding Academy	April 2021

TECHNICAL SKILLS

- Languages: Advanced in JavaScript, TypeScript, PHP, Go, Intermediate in Dart
- Others: React (SPA/SSR/Static), Tailwind, NextJS, Laravel, NodeJS, NestJS, Git, AWS, Firebase, Babel, SCSS, Flutter, Material UI, Redux, Docker, Bamboo, Kubernetes, Jenkins, Gitlab CI/CD, Codex
